

NFTLab Sim

A hands-on sandbox simulating real NFT use-cases, unlocked through quiz progress

The Problem & Our Solution

Reading or quizzing alone doesn't build real confidence in using NFTs; people fear making mistakes with real assets.

- Theory-only learning leaves a gap between knowledge and real NFT usage
- Fear of costly mistakes blocks hands-on practice with real assets
- NFTLab Sim unlocks a risk-free sandbox as users master quizzes
- Users mint, transfer, and redeem demo NFTs mirroring real pilots
- Builds practical confidence before applying NFTs to real assets

How It Works

Quiz mastery unlocks sandbox scenarios where users perform real NFT workflows on Solana Devnet.

- User answers quiz questions tied to a real NFT use-case scenario
- Correct mastery unlocks the matching sandbox scenario (ticket, loyalty, membership)
- User mints, transfers, or redeems demo NFTs via Wallet Adapter on Solana Devnet
- Anchor programs and Metaplex standards power on-chain minting and transfers
- Progress tracker (PostgreSQL) records completed scenarios and unlocks a certificate NFT

Built with

Solana, Anchor, Metaplex, Next.js,
Solana Devnet, Wallet Adapter,
PostgreSQL

Why Now & What's Next

Real-world NFT utility pilots are multiplying, creating fresh scenarios to simulate as practical demand grows.

- Ticket resale, loyalty, and membership NFT pilots are launching worldwide
- Interest is shifting from speculation to practical, everyday NFT utility
- Next: add new scenario modules based on emerging real-world pilots
- Next: introduce social and competitive sandbox challenges
- Next: explore partnerships to turn simulations into real pilot onboarding
